```
graph TD; Start((Form Received)) --> Process1[Some Process]; Process1 --> Decision{Conditional: have needed info?}; Decision -- No --> Process2[Some Other Process]; Process2 --> Process3[Process the Third]; Process3 --> End1(((We're done anyhow))); Decision -- Yes --> End2(((Good, we're done)));
```

The diagram illustrates a workflow process. It begins with an event 'Form Received' (yellow circle). This leads to a process 'Some Process' (teal square). Following this, a decision point 'Conditional: have needed info?' (teal diamond) is reached. If the condition is 'No', the flow proceeds to 'Some Other Process' (teal square), then 'Process the Third' (teal square), and finally ends at 'We're done anyhow' (yellow circle with a dark blue border). If the condition is 'Yes', the flow bypasses these steps and ends at 'Good, we're done' (yellow circle with a dark blue border). Each node includes a description and a placeholder for input/output data.
